Abstract

Homestay is the alternative accommodation facilities available in tourism destinations. Homestay is familiar at global level. In India, people prefer to travel and explore the all kinds of destinations homestay is becoming a more of preferred accommodation. The major reason to choose homestay accommodation by the tourists is enjoy the fresh air, greenery and ambience of home, to taste the traditional food, understand the culture of the destination and cost of food and accommodation.

Key Words: HTML,CSS,Home Stays,PHP,Data Base, Web Server

1 Introduction

For a protracted time, numerous tourism standards which include eco-tourism, buying tourism, cultural primarily based totally tourism, competition primarily based totally tourism, ethnic-tourism, artwork and historical past primarily based totally tourism, sports activities tourism and nature-tourism were delivered in Malaysia. All those tourism standards were included and proclaimed because the advertising method of tourism merchandise withinside the global level.

As improvement theme, tourism has continually been a focal factor in discussions due to the fact the needs and roles of tourism are taken into consideration dominant in influencing the reputational transformation of a place. The reputational transformation of a place may be extra significant whilst it makes the maximum of the local people involvement withinside the deliberate tourism improvement sportsz especially withinside the context of setting up equality withinside the distribution of assets and opportunities.

1.1 Problem Statement

We are looking for lower and better accommodation due to the increase of travelers, homestay provide for these needs with convenient services. In the previous papers they hadn't initialized the option to select which type of homestay they need like hill view homestay, evergreen home stay, beach view homestay etc., and also feedbacks of customers and check in and check out time. In our project we will try to include these facilities.

1.2 Proposed Work

Here, we are using the technologies such as HTML, CSS, JAVASCRIPT, PHP, BOOTSTRAP and many more in developing the webpages for the carpooling system such that it consists of different sections such as the admin login, user login and create an account. With all the contents read and understanding the contents of papers we are considering the architecture in developing this project are firstly, we have introduced home, about, photos of

home stays, admin login and finally user login if we don't have an account. we will provide an option to create an account. Once logging into the website, we will get booking form there we can book the home stays by filling the details of us that we need to fill there what type of home stays we need and single type or double type or triple type and check in date and time and also check out date and time and our address etc. After filling all the details when we click the submit button, we are directed to the payment page and after filling the card details when we click the submit button if we enter the correct details, we get a page that the room is booked successfully. And also, we can check the booking details of our home stays.

1.3 Expected Outcome

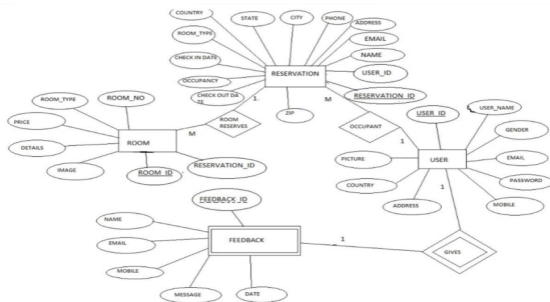

- The user interface shall be simple and easy to use.
- Simple payment method and receipt of confirmation.
- The most user-friendly website for client satisfaction.
- Quick service will save time and money.
- Mobile and PC access is simple.
- It is possible to do shopping from anyplace.

1.4 Possible Technology For Proposed System

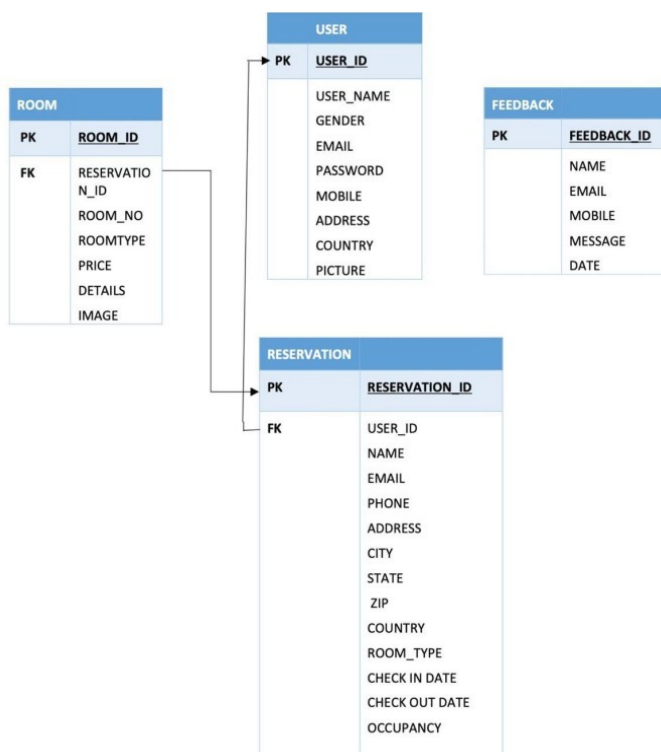

- XAMPP Software
- Programming Language: PHP
- Server: Apache server
- Database: MySQL
