**TITLE*: HOMESTAY*

ABSTRACT:

Homestay is the alternative accommodation facilities available in tourism destinations. Homestay is familiar at global level. According to Homestay.com, the global level market for homestay is estimated to be valued at $15 billion. In India, people prefer to travel and explore the all kinds of destinations homestay is becoming a more of preferred accommodation. The number of homestays gone up from less than 100 in 2004 to 10,000 in 2016 with the highest number in Kodagu, Chikkamagaluru, Shivammoga and Hassan. More than 3000 homestays are available in Malnad region of Karnataka. Other than Malnad, homestays also operate in Belagavi, Dharwad, Ballari and Bangaluru rural. The major reason to choose homestay accommodation by the tourists is enjoy the fresh air, greenery and ambience of home, to taste the traditional food, understand the culture of the destination and cost of food and accommodation. The study focuses on the perception of tourists visiting Coorg about the quality facilities available at homestays. The focusses on profile of tourists, facilities, quality services of Homestays in Coorg and finally attempt to provide good suggestions for the better operation of Homestays.

LITERATURE SURVEY:

[1] Chan chai has presented framework for PHP for database management based on the MVC pattern, The MVC pattern is very useful for the architecture of web applications separating the model controller and view of a web app. In addition white box testing for code verification has been used in their module.

[2] Talks about SQL injection attacks that are a major security threat for web applications. The open web application security project which is an international organization has placed SQL injections among the top ten attacks that a web application can have. The author further talks about solutions that can be given to avoid these attacks one of which is placing powerful network sql

injection intrusion detection systems. The paper analyses various latest techniques in sql injection attacks and its prevention methods.

[3] Punam Kumari and Rainun Nandal discussed various useful tools and techniques that are used in developement of a website, they discussed about the procedure follow in a website mostly focused on a local host named xampp. Next they compare different developement frameworks web apps and discuss the life cycle model and framework developement of web applications.

[4] Sushant Kumar Bhandi has discussed useful tips and techniques that are used while developing a professional website and tackling those problems, they have also discussed the appropriate architecture patterns that should be used in a website. Then he has went through common problems faced by the user and understand various technical terms such as code reusability, deployment, production, requirement gathering, etc.

[5] In this paper Poornima and Girish Naik have focused on implementation of object oriented programming concepts in PHP with special emphasis on encapsulation, polymorphism and encapsulation.
They have explored XAMPP in a larger detail and have given an insight to its core working.

[6] In this paper Ramesh Nagilla have compared various web developement technologies. Many technologies like Cold Fusion Markup Language (CFML) Active Server Pages (ASP.NET) , Ruby on rails , PHP are available in the market. These technologies are useful for achieving goals of business organisations . Many points are taken in to consideration by the author in order to differentiate them and conclude which technology is finally better.
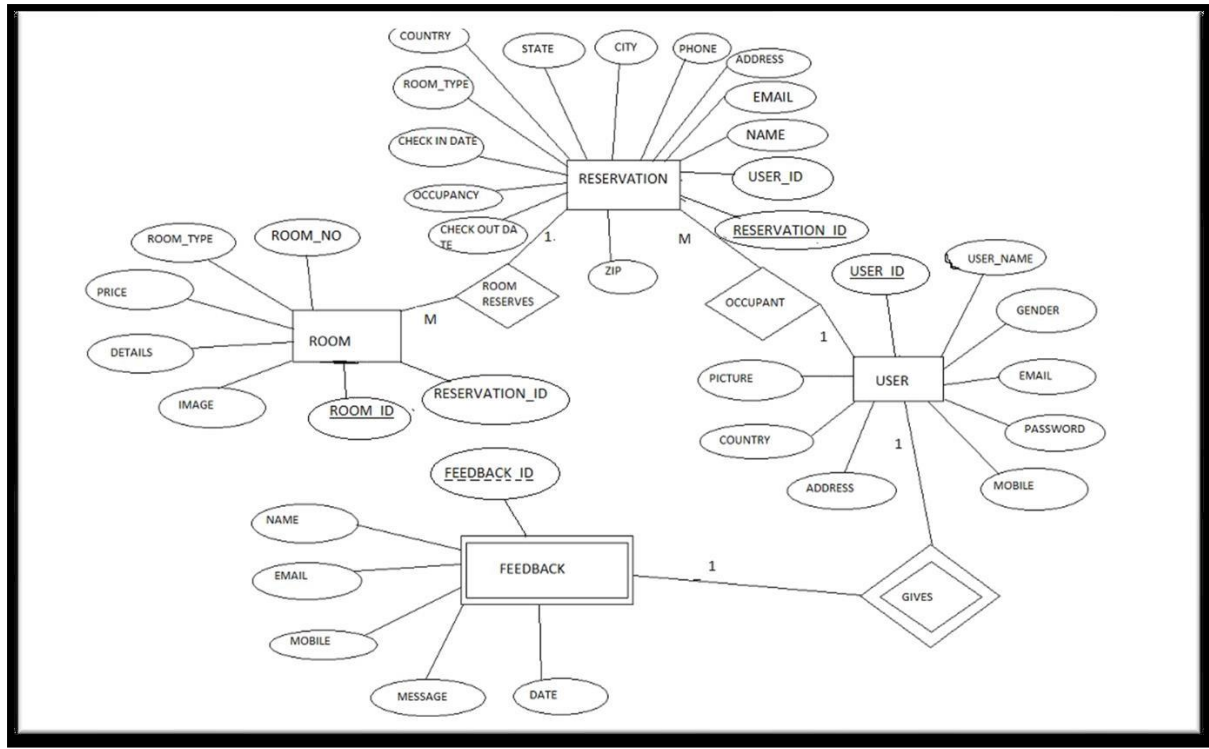

[7] Author Fhery Agustin and Helmi compare the quality between Appserv and Xampp webserver . After comparing on various factors they came to conclusion that xampp earn 0.4185 points and Appserv only earn 0.3996 points hence rendering Xampp to be worthy to be recommended to programmers as a base web application server that is more reliable.

[8] This paper talks about the whole installation and configuration process of XAMPP Apache server and step by step tutorial on developing an address book program and connecting MySQL database package
